The images are presented in a grid format with a clean white background, and the figures are composed of solid black geometric shapes, primarily triangles and quadrilaterals, against the white background.

Option D is the correct choice to complete the pattern based on the **XOR** logic applied to the first two columns.

The pattern indicates that shapes are consistently **rotating 90 degrees clockwise** in each step, and the missing figure should be a rotated version of the figure in the middle of the bottom row.

The first image in the top row contains a large black shape resembling a "V" with two smaller triangles filling the inner space, pointing towards the vertex of the "V".

The Great Wall of China is not a single continuous wall but a series of fortifications built across the historical northern borders of ancient Chinese states and Imperial China.
